

9309/DM9309 Dual 4-Bit Data Selectors/Multiplexers

General Description

These data selectors/multiplexers contain inverter/drivers to supply full complementary, on-chip, binary decoded data selection.

The 9309/DM9309 contains two separate 4-bit multiplexers with complementary Y and $\bar{Y}$ outputs; however, the two sections have common address select inputs.

Features

- Complementary outputs
- Dual one-of-four data selectors

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
Military	–55°C to +125°C
Commercial	0°C to +70°C
Storage Temperature Range	–65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
