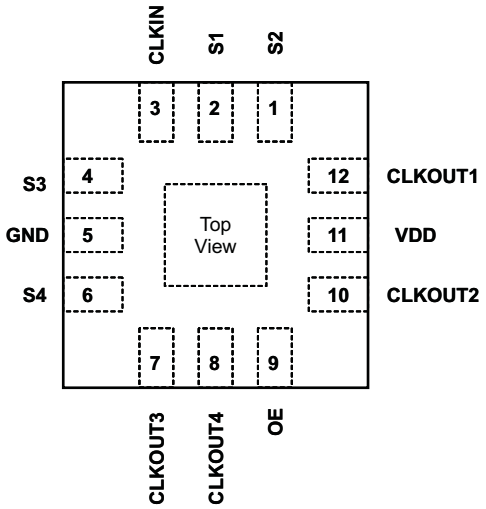
1 to 4 Configurable Clock Buffer for 3D Displays

Check for Samples: CDC1104

FEATURES

- **Input Reference Clock 120Hz–240Hz**
- **Output Clock (Fin/2) 60Hz–120Hz**
- **Output Buffer Drive Strength: 8mA**
- **4 Clock Outputs**
- **4 Control Pins Select Phases of Clock Outputs**
- **Supply Voltage: 3.8V–5.5V**
- **Operating Temperature Range: –40°C to 85°C**
- **ESD Protection Exceeds JESD 22**
  - **2000-V Human-Body Model (A114-B)**
  - **500-V Charged-Device Model (C101)**
- **Package Offerings**
  - **12-pin QFN (3mm x 3mm)**

RVK PACKAGE
(TOP VIEW)



DESCRIPTION

The CDC1104 is a 1 to 4 configurable clock buffer. The device accepts an input reference clock and creates 4 buffered output clocks with an output frequency equal to one half the input clock frequency. Four control inputs, S1, S2, S3, S4 configurable phases of the clock outputs.

ORDERING INFORMATION(1)

T_A	PACKAGE(2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	RVK	Tape and reel	CDC1104RVKR	ZT

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

PIN FUNCTIONS

NO.	NAME	TYPE(1)	DESCRIPTION
1	S2	I	Output clock select. Refer to Output Clock Selection Table
2	S1	I	Output clock select. Refer to Output Clock Selection Table
3	CLKIN	I	Clock Input
4	S3	I	Output clock select. Refer to Output Clock Selection Table
5	GND	P	Ground
6	S4	I	Not internally connected
7	CLKOUT3	O	Buffered CLK Output. Refer to Output Clock Selection Table
8	CLKOUT4	O	Buffered CLK Output. Refer to Output Clock Selection Table
9	OE	I	Chip Enable
10	CLKOUT2	O	Buffered CLK Output. Refer to Output Clock Selection Table
11	VDD	P	Inverted output. No counter delay
12	CLKOUT1	O	Buffered CLK Output. Refer to Output Clock Selection Table

(1) G = Ground, I = Input, O = Output, P = Power

TRUTH TABLE

INPUTS						OUTPUTS

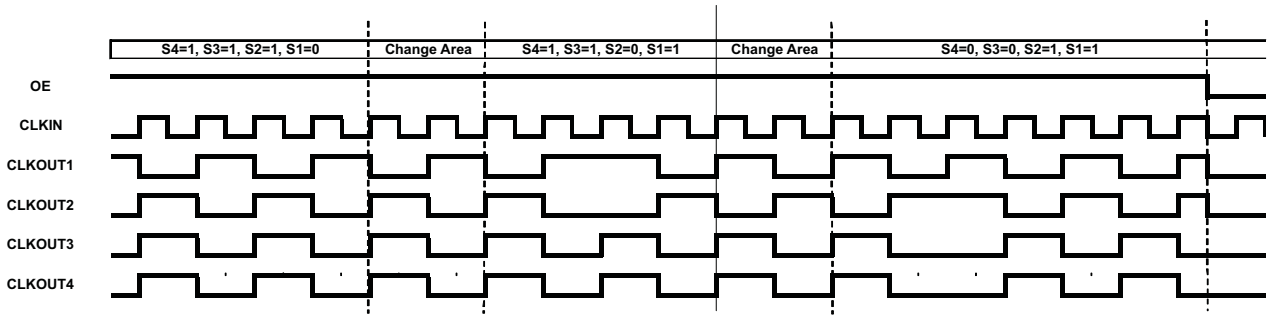
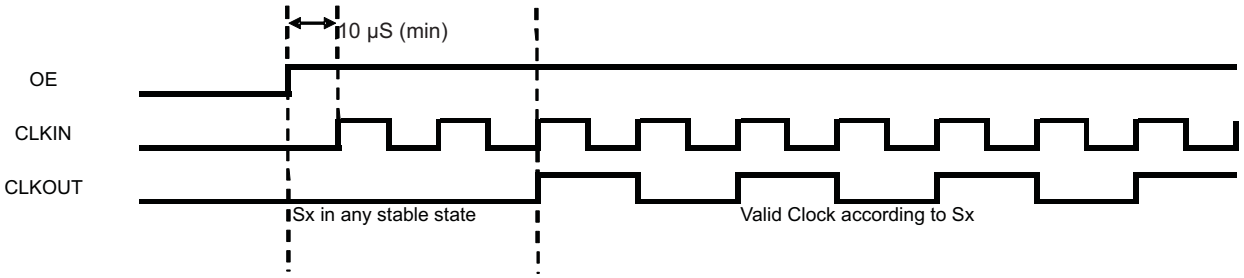
Timing Diagram For Glitch Free Operation

Transition of outputs from any state to any other state



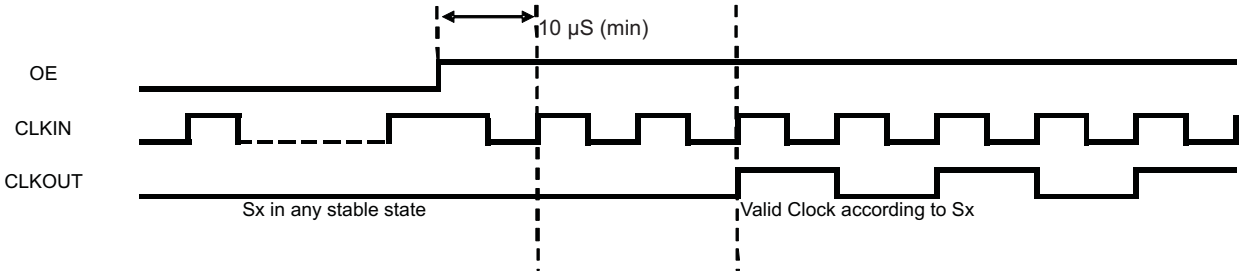
NOTE: Transition to new state will happen after a latency of one output clock cycle after completing the present output clock cycle. Transition to new state will happen after a latency of up to 3 input clock cycles excluding the input cycle where the transition has occurred.

Power Up



NOTE: Transition to new state will happen after a latency of 2 input clock cycles excluding the input cycle where the transition has occurred.

OE Operation



NOTE: Transition to new state will happen after a latency of 2 input clock cycles excluding the input cycle where the transition has occurred.

ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		–0.3	6	V
V_I	Input voltage range(2)		–0.3	6	V
V_O	Output voltage range in the high or low state(2)		–0.3	6	V
I_{IK}	Input clamp current	$V_I < 0$		±20	mA
I_{OK}	Output clamp current	$V_O < 0$		±20	mA
I_{OL}	Continuous output Low current	$V_O = 0$ to V_{CC}		±20	mA
I_{OH}	Continuous output High current	$V_O = 0$ to V_{CC}		±20	mA
T_{stg}	Storage temperature range		–65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

THERMAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
θ_{JA}	Package thermal impedance(1)	RVK Package	72.2	°C/W

(1) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage range	3.8	5.5	V
V_{IH}	High-Level Input Voltage	1.6	5.5	V
V_{IL}	Low-Level Input Voltage	0	0.8	V
I_{IH}	High-level input current		1	µA
I_{IL}	Low-level input current		1	µA
V_I		0	5.5	V
V_O		0	VCC	V
I_{OH}	High-level output current		-8	mA
I_{OL}	Low-level output current		8	mA
T_A	Operating free-air temperature	–40	85	°C

ELECTRICAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	V_{CC}	T_A = –40°C to 85°C			UNIT
			MIN	TYP	MAX	
V_{OH}	I_{OH} = –8 mA	3.8 V	Vcc-0.6			V
		5 V	Vcc-0.4			V
V_{OL}	I_{OL} = 8 mA	3.8 V			0.40	V
		5 V			0.40	V
I_i (CLKIN, OE, Sx)	V_I = GND to 4 V	5.5 V			1	µA
I_{CC} (Disabled)	V_{IO} = 0 V or 5.5V, OE = Low	3.8 V to 5.5 V		0.5	2	µA
$I_{DD\_}$ (Dynamic)	OE = 5.5 V; Sx = 0 V, 5.5 V; CLKIN = 0 V, 5.5 V	5.5 V		20	50	µA
	OE = 3.0 V; Sx = 0 V, 3.0 V; CLKIN = 0 V, 3.0 V	5.5 V		20	50	µA
	OE = 1.6 V; Sx = 0 V, 1.6 V; CLKIN = 0 V, 1.6 V	5.5 V		20	50	µA
C_I (CLKIN, OE, Sx)	V_I = V_{CC} or GND			7		pF

SWITCHING CHARACTERISTICS

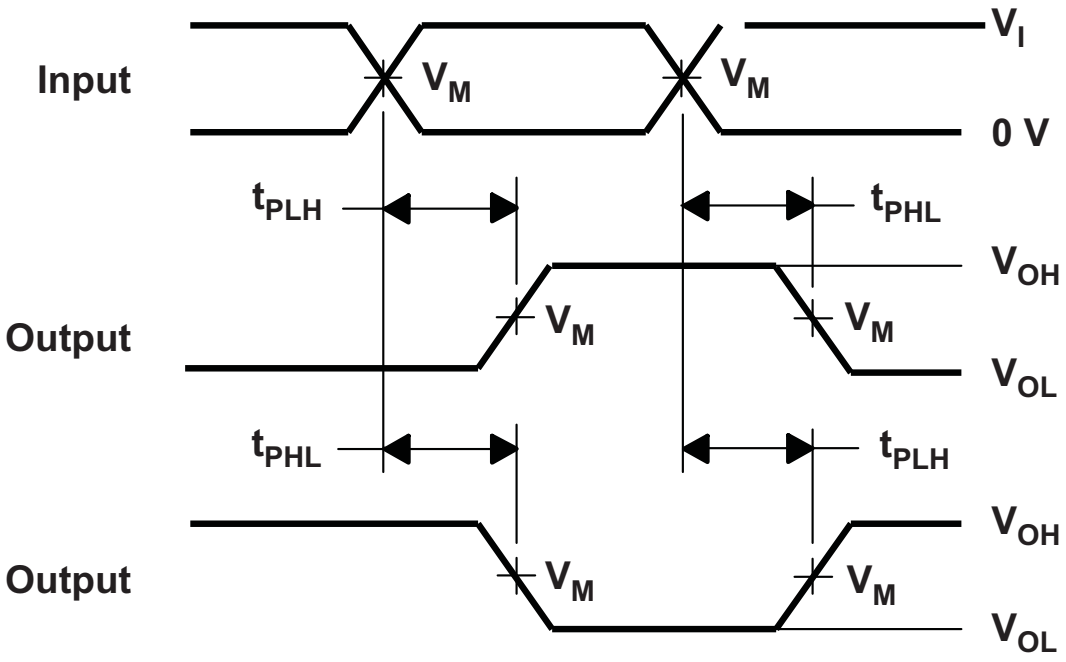
over operating free-air temperature range (unless otherwise noted)

PARAMETER	FROM (INPUT) TO(OUTPUT) V_{CC}	T_A = –40°C to 85°C			UNIT
		MIN	TYP	MAX	
F_{CLKIN}	Input clock frequency	120		240	Hz
F_{CLKOUT}	Output clock frequency	F_{CLKIN} /2		F_{CLKIN} /2	Hz
t_{RISE} / t_{FALL}	Output rise/fall time			10	µs
t_{RISE} / t_{FALL}	Input rise/fall time			50	µs
Input Duty Cycle	Input duty cycle	49%	50%	51%	
Output Duty Cycle	Output duty cycle	49%	50%	5%1	
t_{SU}	Setup time on Sx	60			µs
t_H	Hold time on Sx	60			µs
t_{SKEW}	CLKOUTx skew			10	µs

PARAMETER MEASUREMENT INFORMATION

Propagation Delays

	VCC = 3.3 V ± 0.3 V
C_L	15 pF
V_M	$V_{CC}/2$
V_I	V_{CC}



VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES
INVERTING AND NON INVERTING OUTPUTS

A. C_L includes probe and jig capacitance.

B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.

C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, for propagation delays t_r/t_f = 3 ns, for setup and hold times and pulse width t_r/t_f = 1.2 ns.

D. The outputs are measured on at a time, with on transition per measurement.

E. t_{PLH} and $_{tPHL}$ are the same a t_{pd}.

F. All parameters and waveforms are no applicable to all devices.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/ Ball Finish	MSL Peak Temp (3)	Samples (Requires Login)
CDC1104RVKR	ACTIVE	WQFN	RVK	12	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
