

## NE/SE5019 8-Bit $\mu$ P-Compatible D/A Converter

### Product Specification

#### Linear Products

#### DESCRIPTION

The NE5019 is a complete 8-bit digital-to-analog converter sub-system on one monolithic chip. The data inputs have input latches, controlled by a latch enable pin. The data and latch enable inputs are ultra-low loading for easy interfacing with all logic systems. The latches appear transparent when the  $\overline{LE}$  input is in the low state. When  $\overline{LE}$  goes high, the input data present at the moment of transition is latched and retained until  $\overline{LE}$  again goes low. This feature allows easy compatibility with most microprocessors.

The chip also comprises a stable voltage reference (5V nominal) and a high slew rate buffer amplifier. The voltage reference may be externally trimmed with a potentiometer for easy adjustment of full-scale, while maintaining a low temperature coefficient.

The output of the buffer amplifier may be offset so as to provide bipolar as well as unipolar operation.

#### ORDERING INFORMATION

| DESCRIPTION        | TEMPERATURE RANGE | ORDER CODE |
|--------------------|-------------------|------------|
| 22-Pin Cerdip      | -55°C to +125°C   | SE5019F    |
| 22-Pin Cerdip      | 0 to +70°C        | NE5019F    |
| 22-Pin Plastic DIP | 0 to +70°C        | NE5019N    |

#### FEATURES

- 8-bit resolution
- Input latches
- Low-loading data inputs
- On-chip voltage reference
- Output buffer amplifier
- Accurate to  $\pm \frac{1}{4}$  LSB (0.1%)
- Monotonic to 8 bits
- Amplifier and reference both short-circuit protected
- Compatible with 8085, 6800 and many other  $\mu$ Ps

#### APPLICATIONS

- Precision 8-bit D/A converters
- A/D converters
- Programmable power supplies
- Test equipment
- Measuring instruments
- Analog - digital multiplication

#### PIN CONFIGURATION

8-Bit  $\mu$ P-Compatible D/A Converter

NE/SE5019
