HIGH SLEW RATE OP AMP

SE/NE538

DESCRIPTION

The SE/NE538 is a new generation operational amplifier featuring high slew rates combined with improved input characteristics. Internally compensated for gains of 5 or larger, the SE538 offers guaranteed minimum slew rates of 40V/μs or larger. Featuring 2mV max input offset voltage, the 538 is a single amplifier. Industry standard pin out and internal compensation allow the user to upgrade system performance by directly replacing general purpose amplifiers, such as 748, 101A and 741.

FEATURES

- **2mV input offset voltage**
- **80nA max input offset current**
- **Short circuit protected**
- **Offset null capability**
- **Large common mode and differential voltage ranges**
- **60V/μs slew rate (gain of +5, −4 min)**
- **6MHz gain bandwidth product (gain +5, −4 minimum)**
- **Internal frequency compensation (gain of +5, −4 minimum)**
- **Pin out: 538 same as 741 (single)**

ABSOLUTE MAXIMUM RATINGS[1,2,3]

	PARAMETER	RATING	UNIT
V_{CC}	Supply voltage		
	SE military grade	±22	V
	NE commercial grade	±18	V
P_D	Internal power dissipation FE package	1000	mW
P_D	Internal power dissipation[1] N package	500	mW
P_D	Internal power dissipation[1] H package	800	mW
	Differential input voltage	±30	V
	Input voltage[2]	±15	V
	Operating temperature range		
	SE military grade	-55 to +125	°C
	NE commercial grade	0 to 70	°C
	Output short circuit[3]	indefinite	
	Storage temperature range	-65 to +150	°C
	Lead temperature (solder, 60sec.)	300	°C

NOTES

1. Rating applies for thermal resistances of 240°C/W and 150°C/W junction to ambient for N and H packages. Maximum chip temperature is 150°C.
2. For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.
3. Short circuit may be to ground or either supply. Rating applies to 125°C case temperature or 75°C ambient temperature.

HIGH SLEW RATE OP AMP

SE/NE538

INTRODUCTION

The Signetics NE538 is an undercompensated op amp. The NE538 has a typical slew rate of 50V/μs and a gain bandwidth product of 6MHz.

The internal frequency compensation is designed for a minimum inverting gain of 4 and a minimum non-inverting gain of 5. Below these gains the NE538 will be unstable and will need external compensation (see Figure 1 and 2).

The higher slew rate of the NE538 has made this device quite appealing for high speed designs and the fact that it has a standard pinout will allow it to be used to upgrade existing systems that now use the μA741 or μ748.

Equations:

$$f_{LAG} = \frac{1\ (6MHz)}{10} = \frac{1}{2\pi R_L C_L}$$

$$f_{LEAD} = 6MHz = \frac{1}{2\pi R_F C_F}$$
